

AMENDMENTS

Amendments to the Claims

This listing of claims is presented for the convenience of the Examiner. No claims have been amended.

Listing of Claims

1. (Previously Presented) A system for accessing video data via satellite and wireless signals, comprising:
 - a satellite signal receiver;
 - a satellite digital-to-analog converter;
 - a wireless signal receiver, comprising a singular wireless interface which is operational with a wireless networking card and a computing device;
 - a wireless digital-to-analog decoder;
 - a junction device configured to receive a satellite analog signal and a wireless analog signal; and
 - a display device for viewing video programming derived from at least one of said satellite analog signal and wireless analog signal.
2. (Original) The system of claim 1 wherein said wireless signal receiver is adapted to be included in a CDMA network.
3. (Original) The system of claim 1 wherein said wireless signal receiver comprises a first wireless interface.

4. (Original) The system of claim 3 wherein said first wireless interface comprises an aircard.

5. (Original) The system of claim 4 wherein said aircard is a Type-II PCMCIA card.

6. (Original) The system of claim 4 wherein said aircard cooperates with a video card and a scan converter to convert said wireless signal into a first analog signal which will be recognizable by a television.

7. (Original) The system of claim 3 comprising:
a computing device having a memory component and a processing component, said computing device being accessible through said first wireless interface.

8. (Canceled)

9. (Previously Presented) The system of claim 1 comprising:
a wireless keyboard for interfacing with said computing device through said singular wireless interface.

10. (Previously Presented) The system of claim 1 comprising:
a wireless mouse for interfacing with said computing device through said singular wireless interface.

11. (Previously Presented) The system of claim 1 comprising:
a wireless camera for interfacing with said computing device through said singular wireless interface enabling video telephony.

12. (Canceled)

13. (Previously Presented) The system of claim 1 wherein said wireless networking card creates a wireless local area network.

14. (Previously Presented) The system of claim 13 wherein said wireless local area network is one of a 802.11b and a 802.11g local area network.

15. (Original) The system of claim 1 wherein said satellite signal receiver and said wireless signal receiver are both included in a set-top box.

16. (Previously Presented) A method of providing satellite and video-on-demand service to a consumer comprising:

transmitting video programming using a satellite;

converting said video programming using a satellite from a digital signal to an analog signal;

transmitting video programming over a wireless network connection;

decoding said video programming over a wireless network connection from a digital signal to an analog signal;

combining said analog signal using a satellite with said analog signal over a wireless network connection into a junction device;

providing said consumer with a satellite signal receiver which enables said consumer to view said satellite video programming transmitted using said satellite; and

providing said consumer with a wireless signal receiver, comprising a singular wireless interface that is operational with a wireless networking card and a computing device, which enables said consumer to view said wireless video programming transmitted over said wireless network.

17. (Original) The method of claim 16 wherein said transmitting video programming over a wireless network connection is accomplished by directing said programming over a wireless CDMA network.

18. (Original) The method of claim 16 comprising:
providing said consumer with an aircard;
enabling said consumer to receive said programming through said aircard.

19. (Original) The method of claim 18 comprising:
selecting a Type-II PCMCIA card to comprise the aircard.

20. (Original) The method of claim 16 comprising:
converting said satellite and wireless transmissions to analog so that they may be viewed over a television.

21. (Previously Presented) The method of claim 16, wherein:
said computing device operates remotely through said singular wireless interface using one of a wireless keyboard, a wireless mouse, and a wireless camera.

22. (Previously Presented) A set top box for a television comprising:

a first wireless interface, which is operational with a wireless networking card and a computing device for receiving data files via a digital wireless signal comprising a video program;

a converting system for converting said digital wireless signal into analog so that the video program may be viewed on a television;

a satellite receiving device for receiving data files via a digital satellite signal comprising a video program;

a decoding system for decoding said digital satellite signal into an analog signal so that the video program may be viewed on a television; and

a combining system for combining said wireless analog signal and said satellite analog signal.

23. (Original) The set-top box of claim 22 wherein said first wireless interface is adapted to allow interfacing through a CDMA network.

24. (Canceled)

25. (Previously Presented) The set-top box of claim 22 comprising:
a wireless keyboard for interfacing with said computing device through said first wireless interface.

26. (Previously Presented) The set-top box of claim 22 comprising:
a wireless mouse for interfacing with said computing device through said first wireless interface.

27. (Previously Presented) The system of claim 22 comprising:

a wireless camera for interfacing with said computing device through said first wireless interface enabling video telephony.
